## **DETAILED ACTION**

### ***Response to After Final amendment***

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

### ***Allowable Subject Matter***

2. Claims 1-15 have been allowed.

### ***Reasons for Allowance***

3. The following is an examiner's statement of reasons for allowance:

The prior art of record issued to Miller and Von der Embse either alone or combine fails to teach or suggest “a tracking generator for an RF measurement instrument having a controller and a receiver comprising: means for generating a baseband signal of from baseband data from the controller; means for modulating the baseband signal with a modulation oscillator frequency to produce a modulation signal; and means for mixing the modulation signal with a local oscillator frequency from the receiver to produce a test signal having an output frequency that matches a measurement frequency for the receiver” as cited in claim 1 and its corresponding method of claim 14; and “a tracking generator for an RF measurement instrument having a controller and a receiver comprising: means for generating a baseband signal from baseband data from the controller; means for modulating the baseband signal with a modulation oscillator frequency to produce a modulation signal; means for mixing the modulation signal with a local oscillator frequency from the receiver to produce a test signal having an output frequency that matches a measurement frequency for the receiver; and means for offsetting the output frequency from the measurement frequency, the offsetting means comprising means for controlling a

modulation oscillator frequency for the modulating means to produce an offset in the modulation signal" as in claim 6. Neither Miller nor vonder Embse nor their combination describes "generating a baseband signal from baseband data from the controller." Instead, Miller's and vonder Embse's baseband signals are derived from received input RF and UWB signals. Miller's and vonder Embse's controllers control their receivers, but they certainly do not produce baseband data from which a baseband signal is then generated. For this reason, claims 1 and 14 are not rendered obvious by a combination of Miller and vonder Embse.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
